## CONSTRUCTING A SUSTAINABLE FUTURE

At VINCI Construction Grands Projets, we engineer solutions that are not only financially competitive, but work sustainably for the planet. Superior design and construction practises are helping us save 20,000 tonnes of CO<sub>2</sub> emissions in two years. On the Hallandsas TBM project in Sweden, all the discharged water from the construction sites is monitored continuously quality and quantity wise before sent back to the natural environment. Also on this project, every chemical products used have been through a complete eco-toxicological evaluation regarding their impacts on human health and environment before being approved. Just one way in which VINCI Construction Grands Projets demonstrates sustainability leadership.
